Mach-X team updates

Unity rise are back again for the MACH-X rocketry competion, and leading the team this year we have Joe Wood, supported by Juny Suh as vice team lead. As well as this we have 3 sub team leads, Karl in change of launch vehicles, Thiruwaran leading avionics and Ben guiding the Cansat engineers . This year the team consists of 6 aerospace engineers, Inga, Travis, Neelam, Mathew, Leah and Sergio, 2 Avionics engineers, Matteo and Diptanshu and finally another 2 Cansat engineers Shahd and Muhammad. This competion focuses on building a highpowered rocket to launch a Cansat Satalite (the size of a coke can) into the air at 2000-3000m and challenges university teams across the UK. This competition is the most prestigious rocketry competition in the UK and we look forward to seeing big things from this years team. Good luck guys!

Riddle of the week...

I'm a God, a planet & a messure of heat

What am I?

answer posted next week

WIC 19th october 2026

NRC team updates...

This years NRC rocketry team, Lead by Filip and co-captained by Aiden, is ready, steady and set to go. The 10 membered team had their first meeting on the 21st of September and are looking forward to update us more as the weeks go on! Within the team they have two aerospace engineers, Ellen and Jacob, and two electrical engineers, Cherry and Carol. As well this members Lily, Joanne, Jac, and Kaamini have roles in CAD, Launch Vehicle, Avionics and launch computing leads respectively to complete the team. We wish them luck on the start of this Journey!

Rover team updates...

As for the rover team, we now have a team lead! Selected at the beginning of this week was Nathan, who is now beginning to recruit a further 9 people for the Rover team! If you are interested in taking part in the UKSEDS rover competition, this is the team for you, in this competition students all across the UK design and build a rover that will be tested on terrain to simulate mars. This is a fun and nationally known competion that'll look great on a CV, and applications to our university team 'laser bean' are now open. I'll link the details bellow- many congratulations to Nathan again, and happy applying.

What's up in the space & engineering world?

SUPER COMPUTER ON THE MOON!

Astrolab, an American rover and defence manufacturing company is excited to announce the upcoming launch of their rover FLIP to the moon! And what's special about this rover? Well FLIP is going to be carrying an ultra lightweight, compact and self contained super computer, which is going to be the first time in history a piece of tech like this is going to be used to analyse terrain and conduct AI experiments on the lunar Suface! This is a huge step in NASA's goal to land humans back on the moon, and could play a vital role in exploring moon habitation in the future.

The FLIP rover design includes innovative features such as hyper-deformable lunar wheels, this means the wheels are both robust and malleable, which is crucial to a long lasting design that is going to thrive on the moon. Wheels like this are designed to prevent punctures and preventing sand sinking, this will help reduce the risk to the rover on the Griffin-1 mission and boost rover performance.

FLIP uses no GPS and relies on older photos of the moon to recognise its environment, utilising the AI to determine its coordinates and plot a safe route. On top of this FLIP has a bespoke battery that will allow it to survey all through the lunar night to collect more valuable data over longer periods. It is set to land on the lunar south poll in November, and we are excited to see what data it comes back with!

Weekly event updates

- meeting 23rd October
  - ↳ advertising new comps
  - ↳ rover team applications
  - ↳ meet the committee

*wear pink~ breast cancer awareness
